

How to Use This App

This app is currently in **demo mode** and is designed to help users test how the fraud detection system works — no real bank data required.

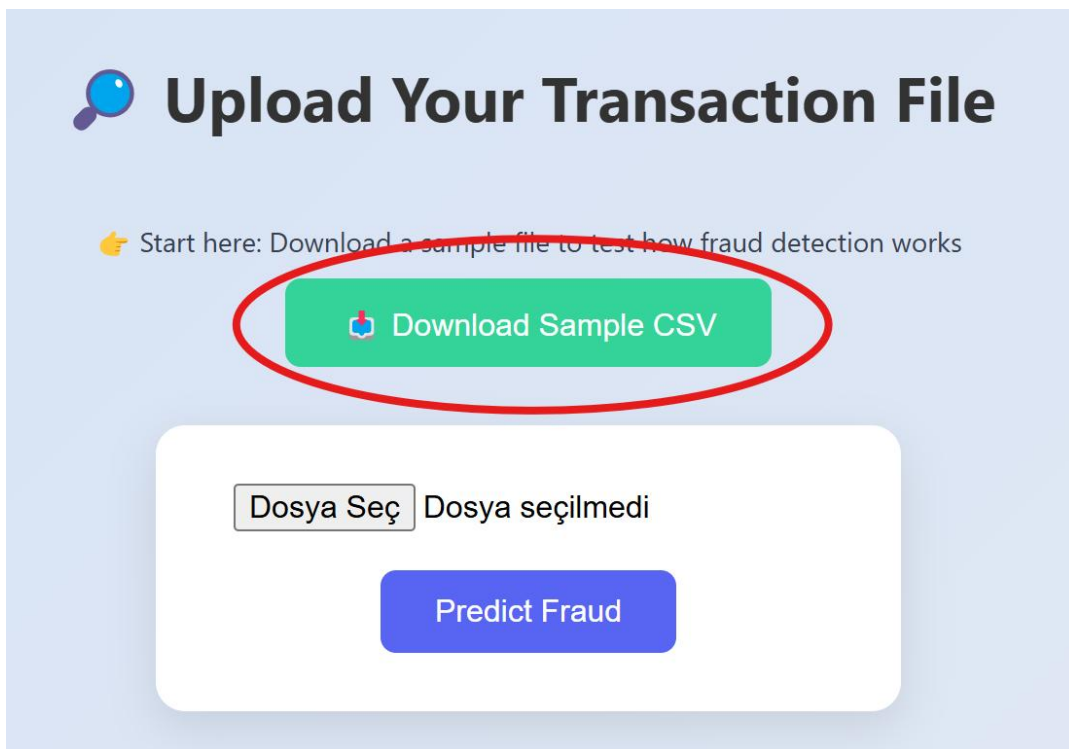

Follow the steps below to experience how it functions:

Step-by-Step Instructions

1. Download the Sample File

Look for the green button labeled "**Download Sample CSV**".

◆ *This file contains dummy transaction data, including a few fraudulent entries so you can test the system properly.*

2. Upload the CSV File

Click the "**Dosya Seç**" (**Choose File**) button to select the sample file you just downloaded.

◆ Once selected, the file name should appear next to the button.

Then click the blue "**Predict Fraud**" button.

Upload Your Transaction File

👉 Start here: Download a sample file to test how fraud detection works

 Download Sample CSV

Dosya Seç Dosya seçilmedi

Predict Fraud

3. View the Results

The app will instantly analyze the data and return:

-  The number of safe transactions detected
-  The number of fraudulent transactions caught

Upload Your Transaction File

👉 Start here: Download a sample file to test how fraud detection works

 Download Sample CSV

Dosya Seç Dosya seçilmedi

Predict Fraud

 49 safe transactions detected. 
3 fraudulent transactions detected.

Demo Limitation Note

This interface is a **prototype** for demonstration purposes only.

- In a real-world deployment, the uploaded file structure would be securely defined to match real bank transaction schemas.
 - No real data is stored or processed.
-

Just Click. Upload. Predict.

We designed this flow to be intuitive even for users with no technical background.

Whether you're a data scientist, fraud analyst, or simply curious — this demo is your sneak peek into how fraud detection works in action.
